

Solutions

1. Use a variable to represent a person's name, and print a message to that person. Your message should be simple, such as, "Hello Moses, would you like to learn some Python today?"

```
C:\Users\njrus\Desktop\python work\message.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
message.py
1
2 name = 'john'
3
4 print(f'Hello {name.title()}! Would you like to learn some python today?')

Hello John! Would you like to learn some python today?
[Finished in 317ms]
```

2. Use a variable to represent a person's name, and then print that person's name in lowercase, uppercase, and title case.

```
C:\Users\njrus\Desktop\python work\name2.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
name2.py
1
2 name = 'joHn'
3
4 # -- name in title case
5 print(name.title())
6
7 # -- name in all uppercase
8 print(name.upper())
9
10 # -- name in all lowercase
11 print(name.lower())

John
JOHN
john
[Finished in 232ms]
```

3. Find a quote from a famous person you admire. Print the quote and the name of its author. Your output should look something like the following, including the quotation marks:

Albert Einstein once said, "A person who never made a mistake never tried anything new."

```
C:\Users\njrus\Desktop\python work\quote.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
quote.py
1
2
3 print('Albert Einstein once said, "A person who never made a mistake never tried something new."')

Albert Einstein once said, "A person who never made a mistake never tried something new."
[Finished in 277ms]
```

- Repeat Exercise 3, but this time, represent the famous person's name using a variable called `famous_person`. Then compose your message and represent it with a new variable called `message`. Print your message.

```
C:\Users\njrus\Desktop\python work\quote.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help

quote.py
1
2
3 # famous person name
4 name = 'Robert Frost'
5 quote = "In three words I can sum up everything I've learned about life: it goes on."
6
7 message = f'{name.title()} once said, "{quote}"'
8
9 print(message)

Robert Frost once said, "In three words I can sum up everything I've learned about life: it goes on."
[Finished in 196ms]
```

- Write addition, subtraction, multiplication, and division operations that each result in the number 8. Be sure to enclose your operations in `print()` calls to see the results. You should create four lines that look like this:
`print(5+3)`

Your output should simply be four lines with the number 8 appearing once on each line.

```
C:\Users\njrus\Desktop\python work\operations.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help

operations.py
1
2
3 # operations
4 print(1 + 7) # addition
5 print(17 - 9) # subtraction
6 print(1 * 8) # multiplication
7 print(56 / 7) # division

8
8
8
8.0
[Finished in 228ms]
```

- Use a variable to represent your favorite number. Then, using that variable, create a message that reveals your favorite number. Print that message.

```
C:\Users\njrus\Desktop\python work\favourite_number.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help

favourite_number.py
1
2 # favourite number
3 favourite_number = 1
4
5 print(f'My favourite number is {favourite_number}.')

My favourite number is 1.
