

Solutions

1. Create variables to store and print the following information about yourself:
 - Your name
 - Your age
 - Your country
 - Your height

```
C:\Users\njrus\Desktop\python work\my_info.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
my_info.py x
1 # In this program, I'll store and print some information about myself
2
3 # These variables have my info
4 name = 'Mark'
5 age = 21
6 country = 'Kenya'
7 height = 1.75
8
9
10 print(name)
11 print(age)
12 print(country)
13 print(height)

Mark
21
Kenya
1.75
[Finished in 228ms]
```

2. Create two variables that will store the price and quantity bought of a product respectively. Create another variable called total that calculates the total cost. Print the result.

```
C:\Users\njrus\Desktop\python work\cost.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
cost.py x
1 # Find the total cost of a product
2 # given the product price and the quantity bought
3
4 price_per_product = 25000
5 quantity_bought = 4
6
7 total_cost = price_per_product * quantity_bought
8
9 print(total_cost)

100000
[Finished in 228ms]
```

3. Create variables for length and width of a rectangle and use them to calculate the area and the perimeter. Print the results.

Area = length x width Perimeter = 2 x (length + width)

```
C:\Users\njrus\Desktop\python work\measurements.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
measurements.py x
1 # Find the area & perimeter of a rectangle given the length and the width
2
3 length_of_rectangle = 15
4 width_of_rectangle = 4
5
6 # Area
7 area = length_of_rectangle * width_of_rectangle
8 perimeter = 2 * (length_of_rectangle + width_of_rectangle)
9
10 print(area)
11 print(perimeter)

60
38
[Finished in 388ms]
```

4. Create a variable called score and assign 50 to it. Print the score, change the score to 75, print the score again, change the score to 90, print the score again. Observe how reassignment works.

```
C:\Users\njrus\Desktop\python work\reassignment.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
reassignment.py x
1 # This program teaches how reassignment works. Observe how the variables value updates itself
2
3 score = 50
4
5 print(score)

50
[Finished in 212ms]
```

```
C:\Users\njrus\Desktop\python work\reassignment.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
reassignment.py x
1 # This program teaches how reassignment works. Observe how the variables value updates itself
2
3 score = 50
4
5 print(score)
6
7 score = 75
8
9 print("My new score is:", score)

50
My new score is: 75
[Finished in 219ms]
```

FROM BASICS TO JUNIOR PYTHON DEV: Variables & Data Types (A)

```
C:\Users\njrus\Desktop\python work\reassignment.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
reassignment.py
1 # This program teaches how reassignment works. Observe how the variables value updates itself
2
3 score = 50
4
5 print(score)
6
7 score = 75
8
9 print("My new score is:", score)
10
11 score = 90
12
13 print("My best score is", score)

50
My new score is: 75
My best score is 90
[Finished in 266ms]
```

5. Imagine you went shopping. Create variables for bread(70/=), milk(60/=) and eggs(55/=). Calculate the total amount you have to spend and store it in a variable. Now assume you have 500/=, calculate the amount you have left after shopping and print the result.

```
C:\Users\njrus\Desktop\python work\expense.py - Sublime Text (UNREGISTERED)
File Edit Selection Find View Goto Tools Project Preferences Help
expense.py
1 # track my expense for the day
2
3 account_balance = 500 # This is the amount of money i have
4
5 # -- items bought and their prices
6 bread = 70
7 milk = 60
8 eggs = 55
9
10 # -- Money that i have spent
11 money_spent = bread + milk + eggs
12
13 # -- get my new account balance
14 new_balance = account_balance - money_spent
15
16 print(new_balance)

315
[Finished in 256ms]
```
