

PYTHON INSTALLATION ON WINDOWS

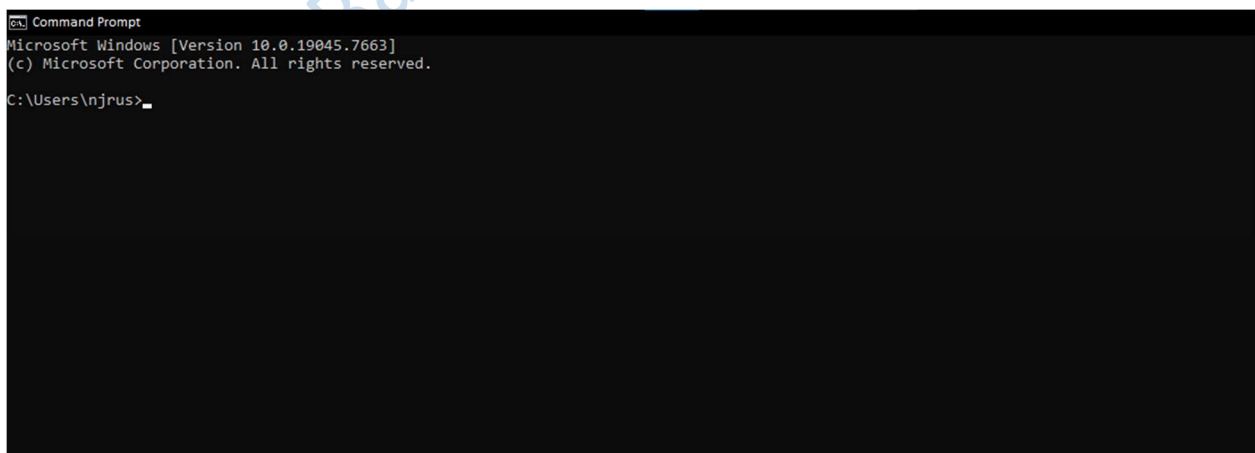

The first step towards learning python language is installing it on your machine. Some computers/laptops come with python installed. Therefore, you will need to check if it is installed and if not, follow the guidelines below to install python correctly in your machine.

Checking Installation

Now to check if python is installed, press the windows button and type 'cmd' (omit the strings).

Press enter or click Open on the right side of the start menu. This window should appear.

While on this window, type “python –version” and do not include the strings. The output of this command tells you whether you have python installed on your machine or not.

FROM BASICS TO JUNIOR PYTHON DEV: Python Installation

If python is installed on your machine, you should get an output similar to:

```
Command Prompt
Microsoft Windows [Version 10.0.19045.7663]
(c) Microsoft Corporation. All rights reserved.

C:\Users\njrus>python --version
Python 3.12.10

C:\Users\njrus>
```

Note that the output **3.12.10** represents the version of python currently on your machine. The most stable version of python start at **3.12** and above. Therefore, if the output on Command Prompt displayed **3.11.10** or below, you'll need to follow the procedure below to install a more stable version.

If you got an output telling you that 'python is not recognized', then, you'll have to install python as well.

```
Command Prompt
Microsoft Windows [Version 10.0.19045.7663]
(c) Microsoft Corporation. All rights reserved.

C:\Users\njrus> python --version
Python was not found; run without arguments to install from the Microsoft Store, or disable this shortcut from Settings
> Apps > Advanced app settings > App execution aliases.

C:\Users\njrus>
```

Installing Python on Windows

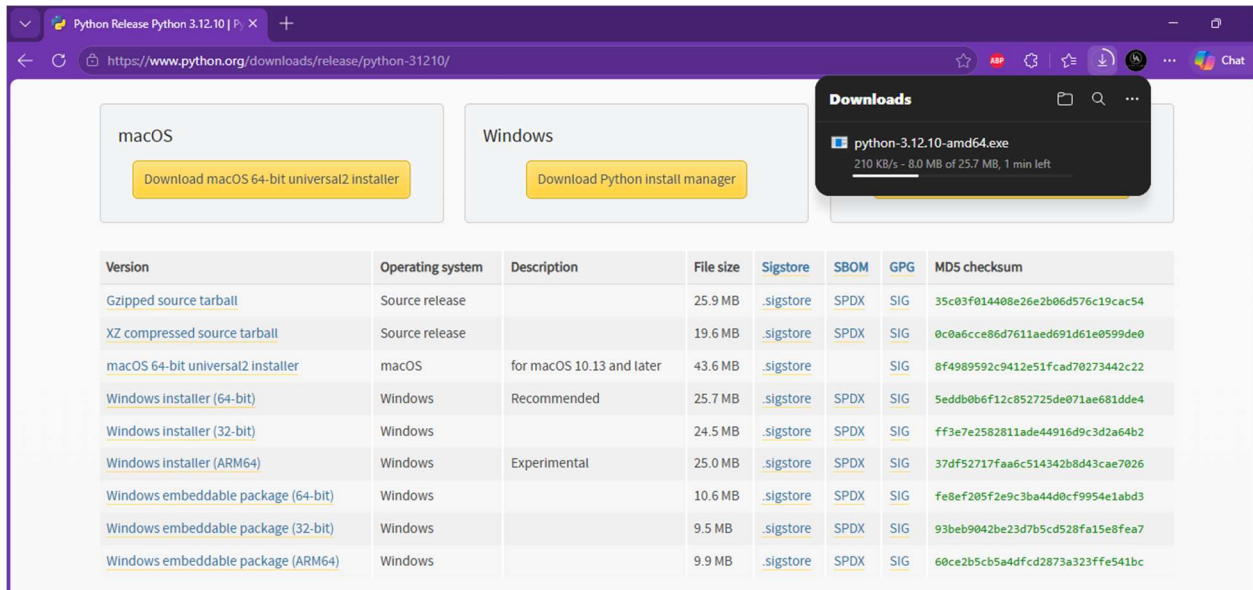

Open your browser and visit this link: [Python Release Python 3.12.10 | Python.org](https://www.python.org/downloads/release/python-31210/)

Version	Operating system	Description	File size	Sigstore	SBOM	GPG	MD5 checksum
Gzipped source tarball	Source release		25.9 MB	sigstore	SPDX	SIG	35c03f014408e26e2b06d576c19cac54

FROM BASICS TO JUNIOR PYTHON DEV: Python Installation

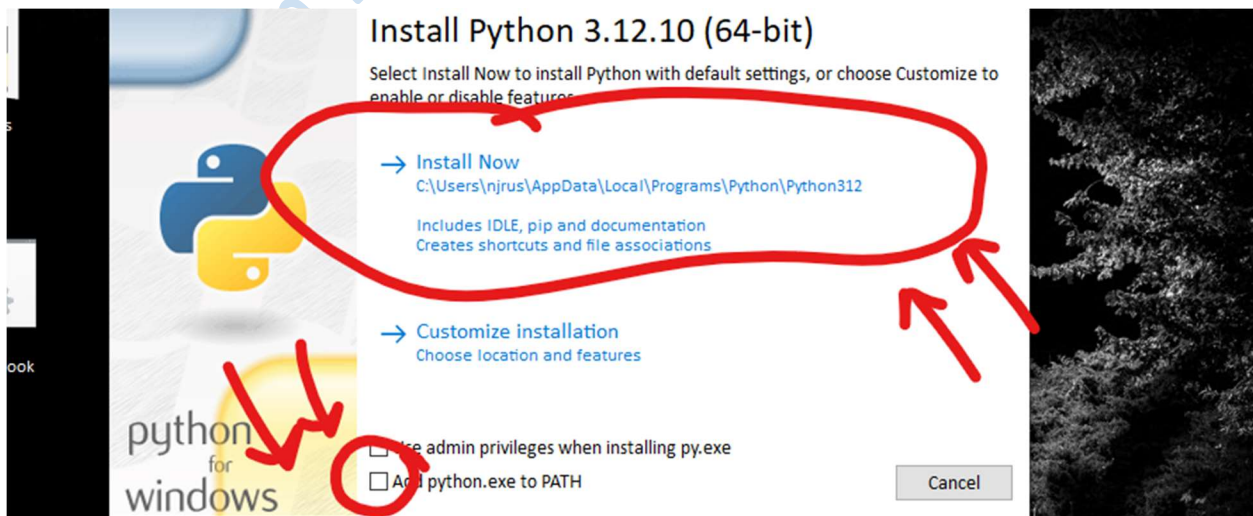

Click on the windows installer and the installer should start downloading right away.

Click 'open file':

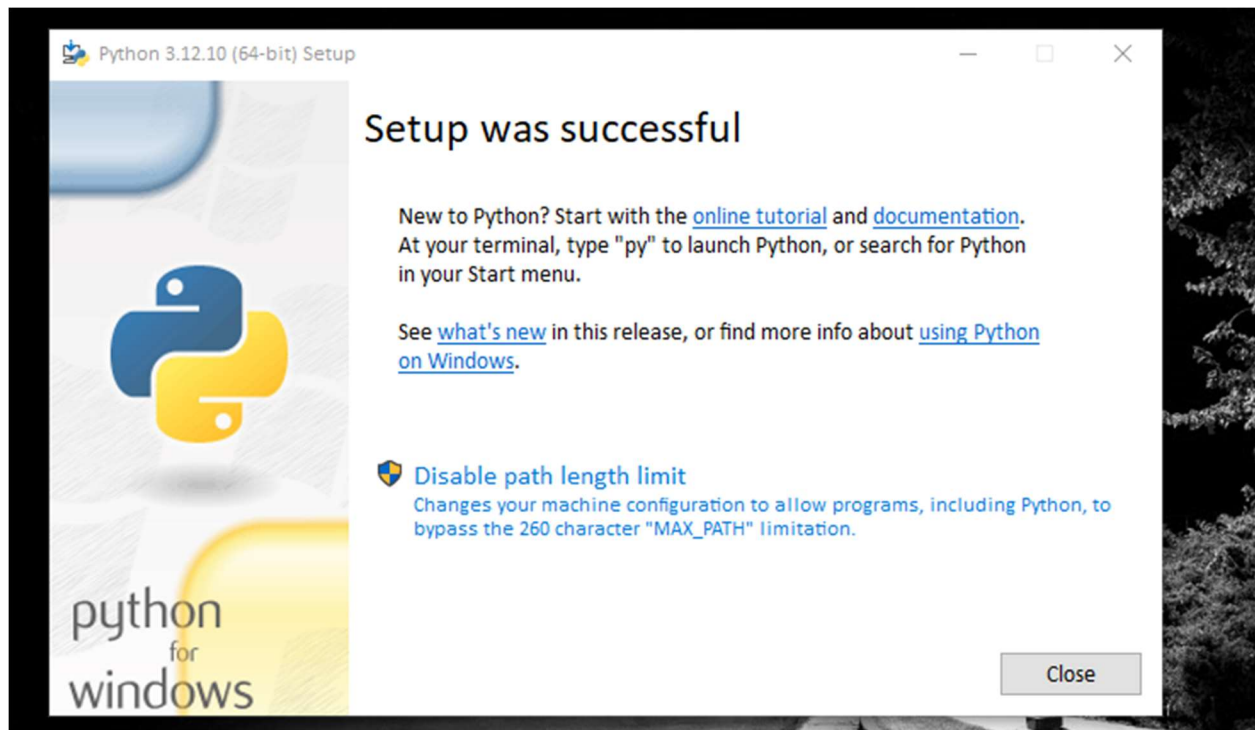

On the window that pops up. First tick ☒ 'Add python.exe to PATH' and then hit 'Install Now':

FROM BASICS TO JUNIOR PYTHON DEV: Python Installation

Finally, you should see this window that communicates python got installed successfully.

However, to ensure that python was installed, close command prompt if it was open, re-open/open then type 'python --version'. The output should be:

If you have this, then python was successfully installed on your machine 🎉.
